

# Maine Coon (COON) Token Economics

**Whitepaper**

**v1**

## Maine Coon:

The most popular pet of man is the cat.

That alone is reason enough for us to launch an active community/staking token - with the goal to get to the top.

With your support we have the opportunity to catapult a cat token into the top 10 of CoinMarketCap.

Of course, you also have the opportunity to support various cat charities through Amazon Smile, because that's what we do!

We love cats and especially we love Maine Coons. Why this is so, you will learn here below in the text.

What Maine Coons are known for: Like a dog, it accompanies its master/mistress and even notifies him of uninvited guests. Hard to believe, but many Maine Coons even like to retrieve. Because of this and because of their strong human bond, the Main Coon is also called a "dog cat".

## Maine Coon: Character

Maine Coon cats are very people-oriented and affectionate. Maine Coons are sociable and friendly with other Maine Coons as well as with dogs or children. They like to demand playtime. If they do this with emphasis, one often hears a kind of cooing or crowing. The breed is also considered a good hunter. In the USA, it is still called "working cat" - a mouse and rat catcher.

## Maine Coon: Attitude and Care

The Maine Coon is a lively cat that likes to hunt and romp. The velvet paw with the great urge to move is happiest when it can enjoy outdoor access. Size and weight of the Maine Coon make special demands on the equipment: It needs a lot of space in the apartment, a stable scratching post with sufficiently dimensioned lying areas and a large cat toilet. Fur care is also important: As a semi-longhaired cat, the Maine Coon needs some help for a silky, well-groomed coat without felt in the undercoat, especially during the coat change. For indoor-only cats, occasional brushing is usually sufficient, especially if the coat is less dense and long.

## Colors of the Maine Coon Cat

Maine Coon cats have almost any coat and eye color. According to the breed standard, the color of the eyes should be clear and match the coat: black, white, red, blue or cream - only gold is not recognized. Also in the coat markings, except "ticked" (multi-colored stitch hairs), everything is allowed. The first American show cat is now accepted by some associations. The requirements differ a little - for example, as far as coat colors are concerned. But there are also characteristics that are the same for all, such as widely spaced eyes and large ears with a wide base.

## History of the Maine Coon Cat

The origin of the Maine Coon is shrouded in legend: Some legends claim that the Maine Coon is a hybrid form of cat and raccoon (English "raccoon"). Others are of the opinion that the cat originates from a breeding of the former French queen Marie-Antoinette. In fact, little is known about the origin of the cat in the northwestern United States. Their ancestors have adapted to the climatic conditions there, which is why the Maine Coon is a robust cat. It has semi-long, dense and water-repellent coat, which protects it from harsh weather conditions. Systematically the breed is bred again since the 1960s, in 1983 also the FIFe recognized the Maine Coon as an independent breed. Because no matter how the Maine Coon originated, today it is also with us a popular and well-known breed cat.

## Special features of the Maine Coon

Maine Coon cats are late developers, which are fully grown only with three to four years. The average Maine Coon age is about 12.5 years, but 20-year-old "oldies" are also known. The Maine Coon cat defies wind and weather with its coat and paws optimized for snow adventures. Because of its origin, the house cat does not tolerate an environment that is too warm. The Main Coon shows special skill with its paws: With it it transports food from the ground into the mouth. Magic? Maybe she learned something from Harry Potter - or maybe she's just clever as an animal.

## Maine Coon (COON) Token Economics

Token name = "Maine Coon"

Token symbol = "COON"

Total Supply = 500 000 000 000

Decimals = 18

COON Staking Contract 50% = 250 000 000 000

### Token Economics was designed to take into account three main pillars:

- A deflationary supply
- A sustainable and responsible release strategy
- A strategic vesting policy via time-limited smart contracts

Here you can find the wallet addresses for the graphic.

## Maine Coon (COON) Token Staking

- 1- Go to the dashboard (pool) linked here: <https://dapp.cooncat.online/>
- 2- Enter the amount of COON token you want to stake.
- 3- Click on Stake, pay the fees for the transaction and wait for the date/time. with (Un-Stake) you can stop the staking again.

## Amazon Smile

Maine Coons are incredible cats. Because they are so people-oriented and affectionate, this can lead people to surrender these wonderful cats. They are very lively cats that love to chase and romp. Of course, something can always get broken in the process.

We are actively looking for ways to help the cats in the real world.

That's why we support Amazon Smile. A percentage of your Amazon purchases will be donated by you to the rescue's organization.

You can join our cause, it's easy and free!

Just use this link <https://smile.amazon.com/gp/chpf/homepage?q=cat> when you place your order and choose an organization.

Amazon will credit 0.5% of the value of your qualifying purchases to the organization you select.

# Roadmap

## Q4/Q1 2021/2022: Whitepaper

- Completion of the whitepaper
- Creation of the Maine Coon Token (COON)
- Creation of an own Staking Pool

## Q2 2022 : Team growth

Promotion of team growth and strategic partners

## Q3 2022 : Listing

- Various Coin Info Pages
- More Exchange listings

## Q4 2022 : Development

- Development of the infrastructure
- Implement further ideas to make the token even more attractive

## Q1/Q2 2023: Further

- Update of the whitepapers
- Further application possibilities for the Maine Coon Token (COON)

## Q3/Q4 2023: Update

- Website update
- Roadmap update

## Binance Smart Chain explains

The Binance Smart Chain (BSC) represents the second generation of blockchain technology. While Bitcoin (BTC), Dogecoin (DOGE) and others are the best known cryptocurrencies, they are only the first generation of blockchains with the sole purpose of producing a product - digital money.

### How does the Binance Smart Chain work?

As a second-generation blockchain, the Binance Smart Chain (BSC) uses the Proof-of-Staked-Authority (PoSA) consensus algorithm. That is, it combines delegated proof-of-stake (PoS) with proof-of-authority (PoA). This makes BSC much more energy efficient than first-generation blockchains based on proof-of-work (PoW), such as Bitcoin or Ethereum. With PoSA, the network is based on staking, or validators\*.

\*A validator is a computer program that checks the syntactical correctness of a document.

### Delegate Proof-of-Stake

A delegated PoS is another step by introducing voting and delegation mechanisms so that those with the most stake power do not dominate the entire network. Almost all newer smart contract blockchains use a PoS derivation - Cardano, Algorand, Solana, Avalanche, Cosmos, etc. PoS have become popular not only because they eliminate the need for miners as such, but they rely on an incentive structure to secure the network.

## Credentials

Finally, those with the highest Staking values receive larger rewards. However, since it can happen that stakes of the same size have different values, the developers used Proof-of-Authority for additional security. PoA simply replaces the monetary value with the identity of the verifier.

Currently, Binance Smart Chain has 21 validators responsible for processing transactions and securing the network, making BSC a highly centralized smart contract platform. By comparison, Ethereum has over 200,000 validators on its way to an ETH 2.0 upgrade.

Finally, when BSC needs an upgrade or patch, it enters an epoch consisting of 240 blocks (about 20 minutes). As another PoS feature to curb malicious behavior - duplicate signatures and node downtime - BSC also uses a "slashing" governance mechanism that removes a significant portion of the validator's share.

## BSC gas fees compared to Ethereum

Even though blockchains are decentralized networks without central oversight, this does not mean they are free to use. Every time a validator processes a transaction, its reward comes from gas fees, which are denominated in gwei as one billionth of ETH.

1 gwei = 0,000000001 ETH

## Characteristics

# Maine Coon

### race

Maine Coon

### origin

USA

### size

large to very large, length up to 120 centimeters, shoulder height up to 40 centimeters

### weight

Cats 4.5 to 6 kilograms, cats 5.5 to 9 kilograms

### anatomy

robust, muscular, broad chest, elongated body, bushy tail

### Buyer form

The rounded wedge head has a foreign impression due to the large, widely spaced and slightly slanted eyes in green or gold.

### eyes

green, gold or copper-colored, very large eyes

### Fur and color

Semi-long hair, long fur on the belly and hind legs, soft undercoat that hardly becomes matted, all colors except golden are allowed

### Grooming

comb and brush regularly

### particularities

tends to have health problems with kidneys, joints and heart due to breeding and size; great urge to move

### character

gentle, sociable, playful, affectionate, intelligent

# Whitepaper

## v1

This is a living document whose information is up to date at the time of publication. It is not advice or any other type of advice. You should not consider the content as such either.

Our Maine Coon Token team suggests that you check everything carefully yourself and agree not to purchase any securities or investments. You also agree to hold our team harmless and not liable for any losses or taxes you may incur in the process. You also agree that the team presents the products "as is" and is under no obligation to provide you with any support or services. You should not have any expectations in any form of Maine Coon Token Economics and its team. Although Maine Coon Token Economics is a community-run Economics and not a registered digital currency, the team strongly recommends that investors in territories where cryptocurrencies are prohibited not to buy them, as the team cannot ensure that your country's regulations are followed. Always make sure that you have looked into the compliance of your local laws and regulations before making a purchase.
